- Police and doctor verification are carried out.
- Passport is issued after successful verification.

2. BOOK BANK MANAGEMENT SYSTEM

Problem Statement

- The system reduces manual library management work.
- Librarian can log in using username and password.
- The system checks damaged and outdated books.
- Books can be borrowed, reserved, and returned.
- Library inventory is maintained properly.

3. EXAM REGISTRATION SYSTEM

Problem Statement

- Students can register for exams online.
- Students can select subjects for examination.
- Student details can be modified in the database.
- Registered exams can be cancelled.
- Registration ID is generated automatically.

4. STOCK MAINTENANCE SYSTEM

Problem Statement

- The system maintains stock transaction details.
- Dealer purchases items from manufacturers.
- Retailers purchase items from dealers.
- Stock inward and outward details are maintained.
- Item availability and total price are calculated.

5. ONLINE COURSE REGISTRATION SYSTEM

Problem Statement

- Students can register for courses online.
- Professors can manage courses and grades.
- Students can add or drop courses.
- Course details can be viewed through the system.
- Students can view report cards securely.

6. AIRLINE / RAILWAY RESERVATION SYSTEM

Problem Statement

- Customers can reserve tickets online.
- Reserved tickets can be cancelled online.
- Train or flight details can be viewed.
- Ticket fare and payment details are maintained.
- Administrator can update transport details.

7. SOFTWARE PERSONNEL MANAGEMENT SYSTEM

Problem Statement

- The system maintains employee information.
- Gross pay of employees is calculated.
- Employee details can be added and updated.
- Database records are maintained properly.
- Employee salary details can be searched easily.

8. CREDIT CARD PROCESSING SYSTEM

Problem Statement

- Customers log in using card number and PIN.
- The system validates customer account details.
- Available account balance is displayed.
- Customers can withdraw required amount.
- Transactions are processed securely.

9. E-BOOK MANAGEMENT SYSTEM

Problem Statement

- The system maintains electronic book information.
- Users can view index of topics.
- Required topics can be searched and selected.
- Selected topic contents are displayed.
- Users can return to the main page easily.

10. ONLINE RECRUITMENT SYSTEM

Problem Statement

- Candidates can apply for jobs online.
- Companies can post job vacancies.
- Applicant details are maintained in the system.
- Recruitment activities are managed online.
- Selection process becomes easier and faster.

11. FOREIGN TRADING SYSTEM

Problem Statement

- The system manages import and export activities.
- Trade transaction details are maintained.
- Foreign customer records are stored securely.
- Trading operations are processed efficiently.
- Business communication is improved.

12. CONFERENCE MANAGEMENT SYSTEM

Problem Statement

- The system manages conference activities.
- Participants can register for conferences.
- Conference schedules are maintained properly.
- Participant information is stored in the database.
- Conference management becomes easier.

13. BUSINESS PROCESS OUTSOURCING MANAGEMENT SYSTEM

Problem Statement

- The system manages outsourcing projects.
- Customer requests are handled efficiently.

- Employee tasks are maintained properly.
- Project delivery process is monitored.
- Outsourcing activities are automated.

14. STUDENT INFORMATION SYSTEM

Problem Statement

- The system stores student information securely.
- Academic records are maintained properly.
- Attendance and marks are updated regularly.
- Student reports can be generated easily.
- Student management process becomes simpler.

15. LIBRARY MANAGEMENT SYSTEM

Problem Statement

- The system manages library records efficiently.
- Books can be borrowed and returned.
- Users can search available books.
- Member details are maintained properly.
- Library operations become easier and faster.

16. PAYROLL SYSTEM

Problem Statement

- The system calculates employee salary automatically.
- Payroll records are maintained properly.
- Employee payment details are stored securely.
- Payslips are generated easily.
- Payroll processing time is reduced.
